

A Team is More than just a Collection of People.

You can hire talented individuals, but if those individuals don't come together as a team your company won't benefit from their full potential.

OurSourcing™ is when outsourcing becomes true teamwork. Teamwork occurs when several elements such as vision, leadership, shared values, and mutual respect combine to achieve a common objective. Here's how it works.

Shared Vision and Goals Your goal is to release the best software product possible while remaining on time and on budget. OurSourcing™ is a shared commitment to success. OurSourcing™ transcends simple "bug hunting" and makes significant contributions toward the achievement of your objectives. As your OurSourcing™ partner, SQA Labs works tirelessly to help you enhance client satisfaction while remaining within your timeline and budget.

"Winning teams gel."

If you seek to outsource your application development processes, you need a cost-effective, low-risk delivery alternative that can also deliver a high level of expertise. We assist with planning, prioritizing and implementing technology solutions via a joint partnership with your IT organization. Whether the scope is for a single application, a family of applications or the full application portfolio, this relationship provides you:

- Optimal cost and accelerated service delivery through global delivery models
- Consistent business and IT value using our application outsourcing experience and processes aligned with the ITIL framework
- A roadmap for gathering your needs, tailoring a solution and defining measures for continuous improvement.

"IP Protection"

Common Ground

To succeed, team members must communicate effectively, share common ground and possess experience with your development environment. As your OurSourcing™ partner, SQALabs utilizes its Silicon Valley experience, low overhead, shared language, business norms and time zone to optimize your software development process and enhance client satisfaction. SQALabs is committed to rural economic development and never subcontracts work overseas.

"Shared business norms and time zone"

Mutual Respect and Collaboration

With OurSourcing™, the barriers between internal and external resources are removed. Software developers and QA engineers work in unison to achieve a common goal. The mutual respect and collaboration developed among team members pays off in productivity, transforming traditional outsourcing from a compulsory need to a valuable company asset.

Open, Honest Communication

Can you measure the value of knowing the real status of your project? As an extension of your team, an OurSourcing™ partner should provide you with regular, honest communication throughout the project. From the start, SQA Labs applies its expertise to help you mitigate risk in your software development process and schedule. SQALabs's metrics-based progress reporting grants you visibility into overall product quality and enables you to accurately forecast your release schedule. Since SQALabs is the first "user" of your software, it can contribute valuable insight and feedback from the perspective of a user, helping you enhance customer satisfaction by delivering the ultimate user experience in terms of functionality and usability.
